DETAILED ACTION

Claims 1-4 are pending in this application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fowler et al. (US 5,753,245).

Fowler et al. ('245) discloses a personal cleansing composition comprising insoluble micronized cleansing particles (abstract). The insoluble micronized particles of the prior art can be derived from a wide variety of materials, examples are aluminum oxide, polyethylene, polypropylene, etc. (col. 4, lines 32-59). The composition further contains surfactants, emollients, preservatives, and a diluent. The surfactant of the composition is selected from anionic, cationic, amphoteric, zwitterionic surfactants and mixtures thereof (col. 5, lines 28-35). Examples of surfactants that can be used are long chain alcohols such as cetyl alcohol (col. 6, lines 1-2) and glyceryl stearate (col. 10, lines 39-40). Examples of emollients chosen in the prior art can be cocoa butter, mineral oil, cetyl alcohol or mixtures thereof (col. 10, lines 45-67 bridging col. 1, lines 1-10). The diluent of the composition can be water (col. 13, lines 18-24). The composition further contains additional components such as chelating agents, fragrance components, preservatives, sunscreen agents and skin conditioning agents (col. 13,

lines 26-67 bridging col. 14, lines 1-27). The prior art does not disclose specific components or that the powder is of about 99% purity, friable and a size of about 120 FEPA or decontaminated by radiation.

However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to chose specific components i.e. stearic acid, methyl- or propylparaben, triethanolamine, or trisodium EDTA which are known in cosmetic composition to produce a facial cleanser and conditioning composition. It would have been also obvious to select powder with characteristics that would provide effective abrasive qualities without damage to the to skin.

2. Claim 4 is allowed.
